

Guru99 Bank Application - Test Plan

Test Plan Identifier Guru99_Bank_TP_001

Introduction

This test plan outlines the testing activities for the Guru99 Bank Application. The objective is to verify the proper functioning of key banking features such as user authentication, customer management, account operations, deposits, withdrawals, and fund transfers. The testing process ensures that the application performs as expected and delivers a reliable user experience.

Test Items

- Login Module
- Customer Management
- Account Management
- Transactions
- Fund Transfer

Features to be Tested

- Valid Login
- Invalid Login
- Empty Login
- Customer Creation
- Account Creation
- Deposit
- Withdrawal
- Fund Transfer

Features NOT to be Tested

The following areas are excluded from the current testing cycle:

- Advertisement banners
- Header and Footer UI validation
- Third-party links
- Performance testing
- Security testing

- Database testing

Approach

The testing process follows an automation-driven approach using industry-standard tools and frameworks. Selenium WebDriver is used for browser automation, TestNG manages test execution, Maven handles project dependencies, Jenkins supports CI/CD integration, and Extent Reports provide detailed execution insights.

Item Pass/Fail Criteria

The test execution will be considered successful when all planned test cases execute correctly and produce expected results.

- Total Test Cases: 5
- Executed Test Cases: 5
- Passed Test Cases: 5
- Failed Test Cases: 0
- Pass Percentage: 100%

Suspension Criteria

Testing activities may be suspended under the following conditions:

- Application becomes unavailable
- HTTP 500 server errors occur
- Browser driver initialization failure Jenkins build or pipeline failure
- Critical application functionality failure

Resumption Criteria

Testing will resume once the identified issues are resolved and the testing environment is restored.

- Environment restored successfully
- Reported defects fixed
- Test data available
- Jenkins services operational

Test Deliverables

The following deliverables will be generated during the testing process:

- Test Plan Document
- Test Case Documentation
- Automation Framework

- Extent Reports
- Jenkins Reports
- Bug Reports
- Test Summary Report

Environmental Needs Software Requirements

- Java
- Selenium WebDriver
- TestNG
- Maven
- Jenkins
- GitHub

Browser Support

- Google Chrome
- Microsoft Edge

Hardware Requirements

- Windows 10/11
- Minimum 8 GB RAM

Responsibilities

Shiv Dayal Singh is responsible for planning and designing test cases, developing automation scripts, executing test scenarios, analysing results, reporting defects, maintaining the automation framework, and managing Jenkins CI/CD activities throughout the project lifecycle.

Schedule

Activity	Timeline
Test Planning	Day 1
Test Design	Day 2
Framework Setup	Day 3
Script Development	Day 4
Test Execution	Day 5 - Day 6
Retesting & Validation	Day 7

Risks and Contingencies

The following risks may impact the testing process:

- Instability of the Guru99 application
- Unexpected HTTP 500 server errors
- Browser compatibility issues Internet connectivity problems
- Jenkins configuration or execution issues

Appropriate mitigation steps will be taken to minimize their impact on project execution.

Tools Used

- Selenium WebDriver
- Java
- TestNG
- Maven
- Jenkins
- GitHub
- Extent Reports
- Jira

Approvals

Trainer: Ms Vaishali Ahire

Prepared By: Shiv Dayal Singh
